SpaceOps Poll Results for 2018

The following presents the results of a non-representative poll among the SpaceOps community based on approximately 10 votes per question – but I think it represents the outspoken opinion of engineers who cared to cast their vote and state their opinions.
Thank you for that!

Qutr#1
Will 2018 be the year when US astronauts will leave from US soil again?
Yes 50%
No 37.5%
Rather 2020: 12.5%

Qutr#2
With the latest discussions on facebook's security policy: Do you feel trapped or invaded by facebook?
Yes 46%
No 38%
So far no Problem, but security must be improved: 16%

Qutr#3
Since the invention of the 8"-floppy disk, long term data archiving is a problem. A Finnish company (Piql) is guaranteeing secure data archiving for 750 years. The data is converted to QR-code images and recorded on conventional film, the films then are stored in a remote, abandoned coal mine in a modern high-tec environment.
Do you think this storage technique will replace the old-fashioned printed book in the long run?
Yes 0
No 100%

Qutr#4 2018
With all the problems we are facing on Earth - would you think we should refocus the goals for human space exploitation and invest more effort on "Earth maintenance"?
Yes 40%
No 60%
